

EXTENDABLE CONVEYORS

Our extendable conveyors increase production and promote safety. In addition to facilitating a speedier loading and unloading process, extendable conveyors minimize the need for operators to carry heavy materials and make working conditions more ergonomic. Extendable conveyors are an excellent solution for dynamic material handling processes.

We can make both manual and motorized extendable conveyors, as well as customize them to extend on one or both ends of the conveyor. Our extendable conveyors can also be made to adjust to a variety of heights and angles.

Our extendable conveyors can be engineered as mobile or stationary units!
